

## MITCHELL ELEMENTARY SCHOOL ADDITION

In order to accommodate the growing communities of Mitchell, Manitoba and surrounding area, the Hanover School Division required significant expansion of the Mitchell Elementary School. The 11,142 square-foot addition includes five new classrooms; a learning commons, which opens into a large multi-purpose room; an entrance vestibule; and washrooms and service space. Additionally, outside of the LEED project boundary, a subsequent renovation to the existing school was undertaken in order to expand and renovate the kindergarten classrooms; renovate the administration and staff areas; and provide much-needed consolidation of the educational support and resource areas.

The project team worked in close collaboration with the Hanover School Division to prioritize the school's need and determine the scope of work that would best serve the school and meet the project's sustainability goals within the project budget.
