

VIROX TECHNOLOGIES INC.

Virox Technologies Inc., a leading chemical engineering innovator of safe, effective and sustainable disinfectants, was the first chemical manufacturer in Canada capable of developing Ecologo® and Green Seal Certified products in a state-of-the-art 68,500+ square foot LEED-certified facility, headquartered in Oakville, Ontario. Our environmental commitment goes beyond our ground-breaking disinfectant technologies and products and is reflected in our operations and building technologies.

Virox has invested in its operational sustainability with building upgrades including expansions, retrofits, and technological advancements that deliver a multitude of benefits to its occupants and the surrounding environment:

- Installing JADE™ HEPA-RX air filters remove >99.99% of airborne pathogens,
- Retrofitting all building lights to LED's improves energy efficiency,
- Installing electric vehicle charging stations, bicycle racks, and shuttles to connect staff to city transit services encourages alternative modes of transportation,
- Enhancing our recycling program has achieved a 90% waste diversion rate.

These are just a few sustainability initiatives undertaken to improve building performance, reduce operating costs, and provide a more healthful and productive environment for occupants.

As a disruptor in disinfectant technology and infection prevention, our focus on health and environmental sustainability is a legacy that we will pass on to future generations.
